DETAILED ACTION

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

Claims 1-4, 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over '562 patent in view of Japanese patent Abstract 08-117745 of record for reasons of record.

Response to Arguments

Applicant's arguments filed 9/21/06 have been fully considered but they are not persuasive.

Applicants argue that the combination of references fail to disclose the claims as amended: "A water heater, comprising: a heat source; heat exchange means for receiving water, heating the received water, and supplying the heated water, said heat exchange means including a water pipe; and electrolytic water generating means for generating acid water and alkali water, wherein ... a removing operation of scale having salt as a main ingredient adhered to a water pipe of said heat exchange means is performed., using the acid water produced by

said electrolytic water generating means," in combination with the other claimed features.

The '562 patent discloses a water heater (col. 6, lines 1-3), which would read on the heat source, heat exchange means including a water pipe would read upon the claimed water piping disclosed in col. 6, lines 1-9. The reference further discloses electrolytic water generating means and the removing operation of scale as claimed (see claims 1-4).

Applicants argue that the '562 reference fails to disclose the claimed subject matter of claim 1 as amended "if a hot water supplying operation time exceeds a preset value, a removing operation of scale having salt as a main ingredient adhered to a water pipe of said heat exchange means is performed for a predetermined time using the acid water produced by said electrolytic water generating means while the hot water supplying operation is stopped," in combination with the other claimed features.

The Eki patent teaches that at a preset time or when the water supplying operation has exceeded a preset value, a removing operation of scale using acid water produced by said electrolytic water generator while the hot water supplying

operation is stopped (see col. 10). The reversal of polarity causes the formation of acid at the electrode which was a cathode to remove the scale.

Accordingly, the claims stand rejected.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
